

# Cameron Housing Authority

Connecting buildings one Siklu at a time

## The Customer

Cameron Housing Authority

## Industry

Residential

## Location

Cameron, MO

## Project Timeframe

January 2021 - March 2021

## Services

- Video Surveillance
- Point-to-Point Networking

## The Challenge

Being without an existing video surveillance system, CHA was concerned about the safety of their tenants & property but did not have the needed situational awareness or devices to deter criminal activity. To further aggravate the situation, there was not a reliable infrastructure to host a video surveillance system for their property which consisted of over 40 buildings.

## The Solution

ADS installed 14 Avigilon cameras throughout the property, which were all linked together and ran back to the server room via a Siklu wireless point-to-point network, allowing CHA to manage their entire video system from a single interface. ADS also provided two poles and fit them with camera hardware to provide maximum coverage of the surrounding areas & tenant housing. Battery backups were given to CHA in order to power the camera system in the event of a power failure.

## The Result

Working together, CHA & ADS achieved the housing authority's mission of utilizing a reliable and effective security solution from a central location. The implementation provides CHA residents with a safe and secure environment for years to come.

*"ADS was phenomenal when installing our new security camera system. The workers were very professional. The system is very easy to use and we love it!"*

- Julie Ausmus, Executive Director, Cameron Housing Authority
